

Put the following list of HTML element tags in syntactically correct order.

OPEN BOOK, OPEN NOTES, OPEN COMPUTER, etc. so that you can always look up an unfamiliar element. (But you **MUST** do your own work! No communication with other, living, HUMANS!)

`</head> <ol> </body> <body> <li> ... <head>`

Please write out your tags below, vertically. Indentation will help me to grade your work and will also help YOU to make sure that you get all of the tags in there, and in proper order!
